

Java Full Stack Web Development Internship – Task 1

Landing Page + Contact Form

Task Description

Now **it's time** to go **full stack**! You will create a **modern landing page with a contact form** that connects to a **Java Spring Boot backend**.

This is your **first real full-stack project**: the frontend collects data → backend receives & processes it.

What You'll Build (Requirements)

Frontend (HTML + CSS):

- Landing page (same structure as above)
- Contact Form: Name, Email, Message + Submit Button

Backend (Spring Boot – Java):

- Setup a Spring Boot project
 - Create a Controller to handle form submissions
 - Print submitted data in the console (no DB yet)
-

Skills You'll Gain

- ✓ HTML & CSS for landing page design
- ✓ Form handling in HTML
- ✓ Java Spring Boot project setup
- ✓ POST request handling with Controller
- ✓ Full-stack workflow understanding

📁 Sample Starter Code

👉 Form HTML:

html

```
<form action="/contact" method="post">
  <input type="text" name="name" placeholder="Your Name" required>
  <input type="email" name="email" placeholder="Your Email" required>
  <textarea name="message" placeholder="Your Message"></textarea>
  <button type="submit">Send</button>
</form>
```

👉 Spring Boot Controller:

java

```
@RestController
public class ContactController {
    @PostMapping("/contact")
    public String handleContact(@RequestParam String name,
                                @RequestParam String email,
                                @RequestParam String message) {
        System.out.println("Name: " + name + ", Email: " + email + ", Message: " + message);
        return "Form submitted successfully!";
    }
}
```

✅ Deliverable

- A modern landing page with a contact form
- A Spring Boot backend that prints submitted form data in the console

Free Video Tutorials

- [Spring Boot Crash Course – Amigoscode](#) → Beginner-friendly free crash course.
- [Spring Boot Form Handling Tutorial](#) → Free guide for handling forms.

Documentation & Articles

- [Spring Boot Official Docs](#) → Free official documentation.
- [Baeldung – Intro to Spring Boot](#) → Free high-quality tutorials (some advanced content paid, but basics are free).

Starter Tools & Templates

- [Spring Initializr](#) → Free tool to generate Spring Boot project boilerplate.
- [Bootstrap Templates](#) → Free modern UI templates.
